TOP LOADING RESISTANCE

80 kg (176 lb) at 23°C / 73°F, 30 days. Product temperature when filling pails and warehouse temperature will affect pail performance. IPL recommends to make necessary testing prior to full production.

PALLETIZATION OF FILLED PAILS

To determine the number of pails you can stack according to the product packed, divide the top loading resistance by the total weight of one filled pail. Take that number not rounded up and add the first unit

18 pails per layer
Stacked pails recommendation:
4 pails high / pallet

OPENING AND CLOSING

TO OPEN: Break the Tamper-Evident tab, then remove lid.

TO CLOSE: Snap the lid at break tab area first, then follow all around while releasing air by pressing the center of the lid to burp pail. If using a closing device, use proper burping pads.

Fillers, lid, pail denesters and lidding devices are also available in a variety of combinations. Everything can be seen on brochures and video tape. Live demonstration on site can be done on demand.
